HASSAN JUMAA

Data Analyst

Mombasa, Kenya | 0795 853 435 | jumaah933@gmail.com
Portfolio Site | github.com/Riq-wq | LinkedIn

PROFILE

Data Analyst completing an industrial attachment in business intelligence and analytics, with hands-on experience building end-to-end pipelines from raw data to decision-ready dashboards (Python/Pandas → MySQL → Power BI). Comfortable working across the full analytics lifecycle — cleaning and modeling data, writing production SQL, and designing reports stakeholders can act on — backed by a growing full-stack toolkit (React, Vite, Tailwind CSS).

EDUCATION

BSc Computer Science

Reg. No. CCS/00103/023

Maseno University, Kisumu, Kenya

EXPERIENCE

Data Analytics & BI Attaché

Swahilipot Hub Foundation — Mombasa, Kenya

- Designed and built end-to-end analytics pipelines (Python/Pandas → MySQL → Power BI with DAX) to turn raw operational data into reporting-ready dashboards for business intelligence use cases
- Audited a public repository, discovered exposed database credentials, and remediated the risk by rotating passwords and migrating configuration to environment variables (python-dotenv) — closing a live security gap
- Contributed to internal software development tasks using React, Vite, and Tailwind CSS alongside core data analytics work
- Supported fellow attachés with technical documentation and report preparation, improving consistency across submitted work

PROJECTS

Superstore Sales & Profitability Analysis

- Delivered a complete analytics pipeline — Python-based data cleaning, MySQL storage, a Power BI dashboard, and a summary PDF report — to analyze sales and profitability trends
- Applied advanced SQL (window functions, CASE logic, indexes, triggers) to surface deeper, decision-ready business insights

Employee Salary & Headcount Dashboard — HR Analytics

- Built an HR analytics pipeline (Python/Pandas → MySQL → Power BI) tracking salary distribution and headcount trends, packaged with an accompanying PDF report for stakeholder review

Book Store Web Scraping Pipeline

- Engineered a scraper (Requests, BeautifulSoup, Pandas, SQLAlchemy) to extract and structure product data from a live e-commerce site into a MySQL database for downstream analysis

Personal Portfolio Site

- Developed and deployed a React/Vite/Tailwind portfolio featuring live GitHub API project statistics, scroll-reveal animations, and category-based project filtering

ACHIEVEMENTS

- Proactively identified and remediated an exposed production database credential leak in a public GitHub repository, rotating secrets and adopting secure, environment-variable-based configuration practices
- Independently delivered multiple full-cycle analytics projects (Python → SQL → BI → report), each taken from raw data to a documented, published GitHub repository

TECHNICAL SKILLS

Python (Pandas, NumPy) • SQL & MySQL • Power BI (DAX) • Excel (VLOOKUP, INDEX/MATCH) • Data Cleaning & ETL • Statistical Analysis • Web Scraping

WEB DEVELOPMENT

React & Vite • Tailwind CSS • Git & GitHub • Firebase • M-Pesa Daraja API

CERTIFICATIONS

Data Analytics Essentials — Cisco Networking Academy, Jul 2026
Introduction to Python — DataCamp, Jun 2026
Intro to Programming — Kaggle, Jun 2026
